Diesel marine engines: second edition describes diesel marine. Deven Aranha electronic publishingÂ .A review of copper and copper alloy materials for the potential of preserving erythrocytes during hemodialysis. The dialysis method continues to be the treatment of choice for the removal of uremic toxins. The disadvantage of this dialysis approach is erythrocyte destruction in the dialyzer. We examined literature on dialysis and cell damage by checking the reports of erythrocyte destruction as well as the benefit derived from the use of copper (Cu) and copper-containing medical devices. The available literature showed that a copper-containing dialysate has a potential of producing a protective effect against cellular injury. However, a well-designed experimental study is needed to verify the actual effectiveness of Cu or Cu-containing dialysate on erythrocyte destruction./* * This file is part of the Chelsio FCoE driver for Linux. * * Copyright (c) 2008-2014 Chelsio Communications, Inc.
