In AutoCAD, the client acts as a separate computer system from AutoCAD's server, however the client and the server are both part of the same operating system, Windows. AutoCAD runs on many types of computers, ranging from computers with large amounts of memory to computers with very little memory. AutoCAD clients can be Windows-based or Mac-based. The client starts up before AutoCAD starts. It does not run continuously. It must be launched manually. Launching the client at a time other than before AutoCAD starts is called "double-clicking" the client. AutoCAD displays a message box when the client is launched.
