As participants from the UK’s leading third party IT providers gathered at an event this month to show how they’re using new technologies and capabilities to help customers leapfrog their competitors and address change in their businesses, the main themes that emerge from the talks will be: Remain relevant Nurture talent Enable the business Deliver a seamless customer experience Grow sales Forrester has been hosting several events this year to examine the impact of business transformation in to new technologies, and to explore how the IT and business communities can work together to make the most of the opportunities and challenges ahead. What happens when you look at a real-time streaming analytics architecture for IoT data? The Internet of Things (IoT) is a rapidly growing area of software and technology. There’s a feeling that the Internet is changing, perhaps even in a more profound way than the early days of the Internet boom. It’s also a feeling that this time the changes are digital, rather than based on physical principles. IoT is the interconnection of physical “things” with IP networks and computers in a way similar to how the Internet operates. The technology is still in its infancy, but if the number of connected devices is anything to go by, there are a lot of things being connected to the Internet these days. In 2014, Forbes estimated there were 50 billion active smart devices, and 57% of these devices — over 3.4 billion — were Bluetooth enabled (source). According to a recent report by Cisco, IoT could bring an annual revenue of \$19 trillion (Source: Forbes) by 2025. The Internet f30f4ceada
