This is a free utility under
the terms of the GPLv2
open source license. I was
recently able to test out a
new YouTube app for the
Windows Store that's
based on the iOS version.

The app is called FastTube and it's a bit simpler than the regular YouTube app, which is why I got a chance to check it out. One thing I love about it is that it automatically activates notifications for new videos, so it's good if you're watching a lot of content from one place. The app allows you to search for videos,

playlists, and channels through tabs that are in a “classic” view, but there are a few other tweaks as well. Here’s the quick rundown of what FastTube can do. Full Screen Video If you’re a big YouTube fan, you’re probably used to watching videos full screen at least some of the time. The app allows you to do that without any effort. The

first time you launch it, you're asked if you want to go full screen right away, which is great. Once you confirm, the app will actually create a full screen view right away. It's a simple solution to one of my favorite things about YouTube. Search / Discover Videos If you love to find new content, FastTube should be right

up your alley. The app offers a search tool that can find video content from one of your subscriptions. You can also search for content using keywords. The search tab is a bit simplistic, but it's simple enough to work. The result list is updated in real-time as you type, so if you're looking for a recent video, you can just

type “NBA” and see what pops up. Suggestions FastTube has the ability to suggest videos for you based on a number of criteria. You can search by tags, category, and popularity, and the suggestions are shown in a list. The actual videos can be played from there, or you can switch over to the playlist tab and start listening to the content.

Playlists Playlists are something that YouTube has always been criticized for, especially the way that they might attempt to play a random selection of videos. With FastTube, playlists are created

KeyMacro has a lot of advanced features that can help you create your scripts in a faster and easier way, but first, you need to understand what they are. KeyMacro has a lot of advanced features that can help you create your scripts in a faster and easier way, but first, you need to understand what

they are. KeyMacro is a simple application that uses a macro command to control various commands in your favorite text editor. The program works for both Notepad++ and Sublime Text, and it supports dozens of commands for many basic and advanced actions. It is a standalone application that does not have any visual

dependencies, so you can use it with Notepad++, Sublime Text, or even Vim. The basic idea is that a sequence of keystrokes can be saved, and those can be repeated. For instance, you can use it to open the same file in two editors, or to run an action over and over again. There are hundreds of macros available for you to use in a customized

manner. Compatible text editors KeyMacro works with the most popular text editors. In addition, it has the ability to import from text files with all relevant options, including command names, arguments, and the short description. It is a small application that does not have any visual dependencies, so you can use it with any text editor

you prefer, or with both of them. Multiple tabs support If you use multiple tabs, you can activate more than one at the same time. You can also run actions on them independently, or not, and toggle the tabs for active or inactive state, or show or hide them. In addition, you can set tabs to read only or write only mode, change the tab order, and

add custom labels. It is a standalone application that does not have any visual dependencies, so you can use it with any text editor you prefer, or with both of them. You can set key bindings for macros, and edit them directly in the application. You can even create your own by using the special keybinding mechanism. KeyMacro supports

ExactKey, and a lot of other useful keyboard shortcuts. For instance, you can search for text in files, or sort the tabs in various ways. Macro files KeyMacro can open any.txt file as a macro source, and it will recognize all the options and key bindings you define in the macro. You can even use.txt files from other applications, like

Word

What's New in the TopMost?

TopMost is a free utility for Windows that makes it easy to keep one or more windows in the front layer, without having to manually resize or move them. The program is designed to maximize the desktop real estate by keeping all windows in

the front layer in a single
click. [TopTenReviews]
