I would like to explain why my academic freedom is so essential to the scholarly enterprise that I am willing to take the risk and hope the Court will, in the end, see fit to protect my freedom. My academic freedom comes from the following statement in the American Association of University Professors (AAUP) Principles of Freedom of Expression: “The freedom of teachers and scholars to teach, to study, and to research in the classroom, in the laboratory, and in the library is the most important of the freedoms protected by the First Amendment.” In my case, I am a doctoral student working in the University of North Texas College of Architecture, and I am registered as a doctoral student in the doctoral program. In most academic fields, research requires intense and sustained, long hours of academic freedom. For example, my study of the history of the überpopular science and technology magazine Popular Science required me to spend 10- to 12-hour days every week for three years in the University of North Texas archives and in the library. Popular Science commissioned me to write a dissertation, “The Evolution of American Popular Science, 1900–1930.” The quality of my research comes, in large part, from the fact that I am allowed to follow the evidence wherever it leads me, and the freedom to do so is at the heart of my scholarly inquiry. In fact, research is not possible without such freedom. It is precisely because I am free to follow the evidence and ask questions that require answers that scholarship thrives. It is true that sometimes professors are attacked for their views. Sometimes they are persecuted for not advocating a political cause. And 5b5f913d15
