AutoCAD adds a 3D Paint application. Autodesk Online Systems are officially available. February 1997 : Autodesk reimplements their architecture and the new application architecture is made available to third-party application developers. Autodesk's focus on the Internet continues, with the release of Autodesk Design Review. October 1997 : Autodesk releases a compact Flash version of AutoCAD. Autodesk Design Review software is available on the Web. August 1998 : AutoCAD R4.5. January 2000 : AutoCAD R5.0 released. The first version in almost three years. AutoCAD is now a Web-based application and Autodesk Online Systems is completely integrated. August 2000 : Autodesk Forms Designer is integrated into AutoCAD. AutoCAD is offered in many languages. October 2000 : AutoCAD R5.5. Autodesk introduces drawing applications for use on the Web. November 2000 : Autodesk releases AutoCAD 2000, one of the last versions of the CAD application. AutoCAD Features AutoCAD is a feature-rich product that includes a number of unique features and capabilities. In general, the capabilities of AutoCAD are similar to those of AutoCAD LT, which is aimed at the non-professional market. In addition to the design and drafting capabilities offered by all AutoCAD products, Autodesk also offers software to create web pages and mobile applications, as well as an Internet-based CAD application. Differences between AutoCAD and AutoCAD LT AutoCAD can be used for architectural drafting, engineering design, facility

Jury Finds Police Officer Not Guilty in Man's Death A D.C. jury finds an off-duty police officer not guilty of murder in a 2007 fatal shooting. The Associated Press reports: The jury found Officer Rashad Malik, 32, not guilty of first-degree murder and aggravated assault in the May 2007 shooting of Daniel Hidalgo, 23, outside a laundromat in Northwest Washington, D.C. Malik shot Hidalgo at least five times and then threw him to the ground, according to prosecutors. The officer's attorney argued that his client was not negligent, but doing what was necessary for his own safety. Malik had been off-duty and was driving to a friend's house in Northwest Washington when he saw Hidalgo with several people at the laundromat. "Officer Malik did not start the fight. He did not provoke the incident in any way," defense attorney Philip Mudd said after the verdict was announced Friday. "He was simply in the right place at the right time." Hidalgo was on the ground with his hands behind his head when Malik shot him in the back of the head, prosecutor Raymond Morrogh said.

Morrogh said it was clear from the start of the trial that there was no evidence that Malik had acted intentionally, and that the entire case hinged on the officer's credibility. The jury found Malik's account more credible, prosecutors said. The key quantity for time to event analysis is the hazard function, which is often assumed to be of the form for some event time, event number, or cumulative hazard. Here  $\alpha$  ('alpha') is the rate at which the event occurs. Cox regression is a technique for adjusting for confounders in this setting. The appropriate analysis for time to event data is time-dependent Cox regression. For clarity, this technique is sometimes written as a "time-dependent covariate model", though the term can be confusing since "covariates" are the explanatory variables which are adjusted for in Cox regression. Cox regression is often an appropriate technique for analyzing a time to event model, and because of this we often recommend that people start by fitting a Cox model and comparing the proportional hazards assumption. What is the proportional hazards assumption? The proportional hazards assumption is: The conditional independence assumption: If a model has a proportional hazards assumption, then these two assumptions are equivalent. If there is a violation of the proportional hazards assumption, this is often indicated by including a parameter in the regression model that is described as "time-dependent". There are two common ways to "check" for a proportional hazards assumption. First, the "log-rank" test is often used, and this uses the test statistic : where the fitted values are,,, and is the fitted failure time. If the proportional hazards assumption holds, then the statistic follows a chi-squared distribution with one degree of freedom

## What's New In AutoCAD?

Geometric Heights and Heights: Scaling a drawing proportionally or pixel-by-pixel is now faster and easier. Create your own custom units such as millimeters, centimeters, and decimal inches, without needing to reference a metric toolbox. (video: 1:20 min.) Parallel views: Refresh the viewport to display a parallel view of the drawing, instantly. You can flip, combine, or rotate one or more views to create a unique perspective. (video: 1:10 min.) AutoCAD now uses Microsoft Windows fonts. Opaque and Translucent Mesh Modeling: 3D shapes now have true transparency. Automatically display realistic shadows and reflections, without the need to create a separate model that renders on top of the original model. (video: 1:15 min.) Repair Lines: Lines now have a Repair field, which displays a selection menu of available repairs. Select a repair method such as Extend, Reverse, or Reverse and Extend, and press the Enter key to start working on your repair. (video: 1:11 min.) Soft Borders: Your drawings now support soft borders, a new type of soft edge that doesn't cause any drawing artifacts. (video: 1:02 min.) Polygon Transparency: Working on complex models is easier now that you can select and modify transparency for polygons. (video: 1:06 min.) X and Y base

transformations: Zooming in and out on specific parts of a model is now faster and more precise. You can zoom the entire drawing or the selected viewport, and use the new X and Y base transformations to zoom in on the drawing and move the viewport directly to a specific point or view. (video: 1:10 min.) Convert / DXF: The new Convert option can automatically convert all DXF entities to AutoCAD, AutoCAD LT, or Creo files. New DXF entities include data from existing drawings, such as views, BOMs, LISOs, and sections. (video: 1:09 min.) Hole and Sheet Auto-Repair: New hole and sheet entities help you create more accurate and useful models, and also reduce the time it takes to convert a file to AutoCAD. (video: 1:14 min.)
