Virtual Network and SDR Desktop (VNDS) is designed to work over a virtual network (using Hyper-V on Windows Server). The VNDS Server runs as a Windows service. VNDS Client software runs on any PC connected to the virtual network (or on a Windows Server), and connects to the VNDS Server. It displays the VNDS Desktop, which gives you access to various computer networks.

BypassESI VPN is the easiest way to connect to public WiFi networks while bypassing all the restrictions placed by those networks. It will connect you to an open network and you can surf the Internet directly without fear of censorship or connectivity issues. This video is about PPPoE on HDXL2 and how to configure it with a PPPoE VPN in order to be a point to point connection. Please read the manual to be sure you get it right: The PPPoE connections are the easiest, because they do not require a dynamic IP address. First, we add a PPPoE connection. Next, we set it up to have a static IP address. The IP addresses are provided by a DHCP server. We now create a captive portal and define the new default gateway. The gateway is the IP address of the VPN server. We complete the setup by creating a tunnel through the VPN server and connect to the Internet. This configuration is very compact and self-explanatory, so you can easily use this method for creating a PPPoE VPN connection. It is available in the Manadot vpn package. Create the PAC file and use pppoe.pac to create the pppoe connection from jailbroken iPhone to PC. How to create a PPPoE connection to hotspot-vpn.com In this video we show you guys how to create a PPPoE connection to hotspot-vpn.com with a jailbroken iPhone. This will show you how to create a PPPoE connection for IPVanish. IPVanish is
