Keymacro is a fast and free utility that allows you to accelerate your Windows keyboard. With this program, you can enter keyboard macros (the user-defined phrase that, when triggered, results in the execution of a function) and customize your own shortcut keys. Keymacro can be managed from its own menu, or it can work in "hidden mode" to work silently. Standard setting allows you to easily define and assign keyboard macros to all the available hotkeys on your Windows keyboard, with a single click. You can select from a list of predefined macros, set keyboard shortcut keys, modify its hotkey assignment, enable or disable hidden mode and customize the menu. Keymacro can be used to create shortcuts for your favorite web browsers, web pages, email clients, instant messengers, text editors, programs and more, thanks to its menu of numerous built-in and downloadable macros. Moreover, there are other useful macros to open system programs, take screenshots, or copy text from other programs. New in version 1.6: Version 1.6 includes a new and advanced configuration module. Now, you can create a customizable configuration file that will contain your macros, web browser links, URL, e-mail accounts, and other settings, which you can easily customize and edit in the configuration file.
