General-purpose programming languages At its earliest stage, AutoCAD used Visual Basic, Visual LISP and Visual C for automation. The first AutoLISP system was released in 1996, and it was later replaced by AutoLISP + .NET. Visual Basic was re-implemented using Visual LISP and Visual LISP 3 as part of the AutoCAD 2000 programming model. These new methods, referred to as AutoLISP, can also be used to create custom programming interfaces, components and macros. Visual LISP was also used for the XMetaLISP system. AutoCAD's first AutoLISP module was released in 1997, and the first AutoCAD Dynamic XSLT for AutoLISP was released in 1999. AutoCAD 2000 introduced integrated design time for the first time. In 2000, Visual LISP 3 also introduced a library for creating graphical forms. AutoCAD Map 3D, released in 2001, introduced AutoCAD's first Advanced Visual LISP 3-based programming model. In 2003, AutoCAD 2007 introduced the first of its current Visual Studio-based LISP-based programming model. In AutoCAD 2008, the Visual Studio-based LISP programming model is extended to cover the programming of both the Autodesk Exchange Apps for AutoCAD, as well as the company's tools for visualization and 3D modeling. In 2010, Visual Studio-based LISP was extended for use with HTML 5. AutoCAD 2011 uses the Visual Studio-based LISP programming model, but it supports a different form of LISP scripting. AutoCAD 2012 introduced the API "Visual Studio and Visual LISP", allowing programmers to use the AutoCAD API "Visual Studio" as well as the existing Visual LISP programming model. AutoCAD 2013 and AutoCAD LT 2013 use the Visual Studio-based LISP programming model and API, but they support a new form of LISP scripting. AutoCAD 2014 and AutoCAD LT 2014 support JavaScript, along with Visual Studio LISP. AutoCAD 2015, AutoCAD LT 2015 and AutoCAD Architecture 2015 use Visual Studio-based LISP programming model and API. AutoCAD 2016, AutoCAD LT 2016 and AutoCAD 3D 2016 use Visual Studio-based ca3bfb1094

LONGHORNS A long horn is a wide, rectangular prism-like blade-like extension from the nose of the creature, which is made of horn-like tissue. The nose is usually attached to the animal's head in a way that cannot be easily separated, making it a single appendage. Horns can be found on various species of animals, but are most commonly seen on cervids (carnivorous mammals of the deer family, which includes elk, reindeer, caribou, moose and bison). Most horns are hard, durable and easily shed. However, some can be quite hard to shed, such as the horn of the bison. Horns are frequently used to indicate age or maturity in other mammals, such as in cattle, where animals with longer horns are usually older than animals with smaller horns. Horn morphology varies by species and sex. Typically, males and females of the same species will have similar horns, but the proportion of body weight and the degree of hair growth on the body will vary between sexes and species. For example, in deer species, the horn will only grow
