The design of AutoCAD started in 1969 at a time when computers were considered toys, and AutoCAD software was an exceptional piece of software. It was based on the three-dimensional coordinate system that is ubiquitous in CAD today, and used two-dimensional line and curve drawing. In fact, it was one of the first major commercial three-dimensional CAD applications on the PC. It was developed by a young team of engineers, which included the original programmer of the software. In the early 1980s, after several versions of the software, the founders of Autodesk were given the opportunity to purchase the company. Who was the first programmer of AutoCAD? AutoCAD software was written by Hans-Jürgen Strobel, a former engineer at Eckhardt & Ziegler. Initially named 3-D Draft, it was written on the PDP-11 minicomputer running MUMPS. When the engineers of Autodesk, Inc. were told about this original AutoCAD software, they hired him to rewrite the software from scratch for the IBM PC. Strobel's original AutoCAD software was written in assembly language, which meant that only the programmer understood what was going on inside the computer. Later versions of AutoCAD were written in native code (Intel 8080 assembly), which had better performance. In the original version of AutoCAD, the computer stores a copy of the drawing file and redraws it on the fly for each edit. The first AutoCAD program can draw straight lines, but it cannot draw curves. Curves are implemented as splines, which are well-defined lines that lie on other lines in space. The first version of AutoCAD had a simple user interface and only 16 color choices. Strobel believed that it would take a long time for most users to become familiar with the interface and color choices. Later, Strobel implemented a color wheel and a color map and reduced the number of available colors to 36. The model space that is used in AutoCAD has a two-dimensional coordinate system (x and y) and a third dimension (z), and these two dimensions are called the base and the cross plane. The base is the plane of the paper. The cross plane is perpendicular to the base and lies in the third dimension of space. The base is not actually a plane in the traditional sense, but is a curve in space. What is an x-direction
