Elden Ring Game (hereafter referred to as the “App”) is a free-to-play fantasy action RPG in which you can freely create your own character, and immerse yourself in an epic story where the various thoughts of the characters intersect in the Lands Between. Such as in the olden days, the playable character becomes the focus of the story, which seamlessly connects with the character’s thoughts and decisions. You can customize the appearance of your character by interacting with the game world, and can freely combine weapons, armor, and magic that you equip. You can develop your character according to your play style. An epic fantasy drama unfolds in three parts. In Part 1, encounter formidable monsters and dungeons in a vast world full of excitement. In Part 2, raise a strong party with the allies you have developed, and take on a great threat to the Lands Between. In Part 3, reach a crucial moment in the story and leave an impression on the history of the Lands Between! ABOUT ELDRONT Eldrants have resided in the Lands Between for generations, known for their mysterious aura, incredible power, and grace. A rare power possessed by the Eldrant lineage is the power of the Elden Ring, the legendary weaponry bestowed to the first members of the tribe. The Elden Ring’s power allows the bearer to freely create an Elden Lord in the Lands Between, and every Eldrant possesses the power to become a Lord. The power of the Elden Ring is said to have been left there since the beginning of time, and it is only those who receive a certain fate that can wield it. Eldrants were originally humans who arrived in the Lands Between without knowing of its existence. However, over time, they became separated, and the only ones who were able to possess the power of the Elden Ring were those who received the great fate. This is the story of the Eldrant lineage in the Lands Between. ABOUT VERSUS LINKS Elden Ring Game is fully cross-platform: you can play on the browser, smartphone or tablet. forum, but I don't really like to download file with just a simple call of `window.open`. I prefer to use JS instead download file so that it will be smaller and don't have any browser restrictions or refreshes or redirection. The goal of this code is not to download file as the question its about. I'm reading an excel file and then I would save it locally. But I don't really know how to handle to save my local file. I must be doing something wrong but I can't figure out what's wrong. here is the relevant javascript code that I'm testing. `$(document).ready(function(){ var URL="" + $('#myInput').val() + ".xlsx"; window.open(URL,'_self'); });` It should open the file in online browser, but instead it gives me download error without showing any information.

THE NEW FANTASY ACTION RPG. Rise, Tarnished, and be guided by grace to brandish the power of the Elden Ring and become an Elden Lord in the Lands Between. An Epic Drama Born from a Myth. In the Lands Between, a great conflict has broken out between the Gods of Light and the Gods of Darkness. The Elden King vows to unite the two factions and fight against their sworn enemies, the Dragons. The major faiths of the Elden Kingdom—the Light Gods and the dark Gods—hope that the peace among the Gods can be restored. However, the Elden King has fallen and the full extent of this great divide among

the Gods remains uncertain. Manipulating the attitudes and beliefs of the people, and maintaining the balance of power, the Kings of the Light and the Darkness occupy the titles of Elden Lord and Elden Knight, respectively. While some races are openly hostile towards the Dragons, the hatred between the two races is nothing compared to the utter hatred of their masters. In this battle for the fate of the Elden, the Elden Knight is raised by the divine maiden Amun-Ra and charged to bring the peace of the light and the dark Gods to their end. Accompanied by a band of adventurers, the Elden Knight must pursue the wayward Elden King across the World Between, where the events of a great drama unfold. **THE NEW FANTASY ACTION RPG. I am using HttpClient for a page that returns in the application cache of the browser, but unfortunately it is not possible to get the content-type of the response in the response.Content. The way is to have a name of the header and try to get it with HttpRequest.Headers["Content-Type"] this is a lot of effort and it looks to me that since content-type is an media-specific header, I would expect an HttpResponseMessage with this specific property. A: No you can't, it seems to be a private property. If the response is using the right content-type, you can use the Content-Type HTTP-header and check if it matches the content-type you'd expect.
