The interaction of water with N-alkyl-2-pyrrolidones (N-alkyl-PROHs) was investigated using a combination of calorimetric, spectroscopic, and dielectric methods. Experimental results on the stability and solution thermodynamics of N-alkyl-PROHs in pure water are presented in terms of core and surface energies, which describe the intermolecular interactions present in the solution. The corresponding predicted values were obtained from the literature. It was observed that the core and surface energies of N-alkyl-PROHs increase with an increase in their carbon chain length; however, a significant decrease in their core and surface energies were obtained in aqueous media. For some alkyl groups, the predicted value of the core energy was higher than that of the surface energy. This was associated with a more favorable enthalpy change associated with the process of hydrolysis of N-alkyl-PROHs than the entropy change associated with the process. However, the predicted values of the core and surface energies in aqueous solutions were similar to the values obtained from calorimetric measurements and indicate good agreement. This was attributed to the range of temperatures employed for the investigation (298.15-348.15 K) being within the temperature range in which the solvation of N-alkyl-PROHs are more in thermodynamic equilibrium. However, at lower temperatures, where the solvation of N-alkyl-PROHs is kinetically controlled, the predicted values of the core and surface energies

v6.0.9.1 In the days following
the Fourth of July, many of
us are going to be glued to
our computers searching for
the perfect fireworks

display. We have a few tips for you if you plan to check out a fireworks show this weekend. First, you'll want to check local regulations to ensure that you can do what you're planning. If you're in a city or town that has a limit on time or height of fireworks, you'll want to check with your fireworks law. These limits are because of safety reasons, although they can make a spectacular fireworks show that much more fun. There are lots of sites on the web that provide helpful regulations. For instance, in Houston you can visit (lower left panel) which provides all the rules in Houston for

fireworks usage. Are you still checking out fireworks regulations? We're starting to see some really spectacular and creative firework displays (check out our article earlier this week about the 20th anniversary of the Macy's Fourth of July show). If you're planning to see one, be sure to watch the weather forecast. We've already seen a lot of fireworks shows postponed because of rain, which means your event will be canceled if a strong storm moves in.
