A: Have you tried the following: running iTunes clean and re-downloading it (so that it cleans out any temporary files it may have created) try downloading iTunes via one of the many App Store apps available (some of which will even let you install iTunes as a stand alone app) If none of those has worked, then it may be a problem with your computer or iTunes. Cryosurgery and other EBRT procedures in the management of anal cancer. Despite its low rate of incidence and favorable prognosis, anal cancer remains an important clinical problem. In this article we review the current role of EBRT including cryotherapy, brachytherapy, and external beam radiotherapy in the management of this disease. We summarize the literature and discuss these treatments in the light of our own experience at The University of Texas M.D. Anderson Cancer Center. EBRT in conjunction with local surgical treatment provides good local control for locally advanced and T1-2 disease. The most critical dose of radiation is yet to be defined. High dose EBRT may be reserved for patients with inoperable T3 or stage II-III disease, but the value of this treatment is questionable in view of the high relapse rates and morbidity of this treatment. For those patients who require EBRT, brachytherapy, cryotherapy, or combinations of these approaches are not yet shown to be superior to EBRT alone. Further investigation is required to determine the optimum dose-volume parameters of EBRT and/or brachytherapy alone or in combination. [fig:fig2]a: The fluctuating splitting of a spin triplet is well captured by our theory. [(a) Theory: The solid line represents the evolution of the spin splitting in a GaAs  $\text{In}_x\text{Ga}_{1-x}\text{As}$  quantum well as obtained from Eqs. (1)-(3) for a fixed  $\xi=10$  nm, assuming that the hole distribution in the well follows a Gaussian profile. The dashed line represents the spin splitting calculated assuming the exact same hole profile. (b) Inset: The calculated hole distribution (black solid line) for a wire of width  $L=1000$  nm and height  $h=10$  nm,
