In this work, a nanofluidic approach has been employed to study the thermoelectric effects of individual single-walled carbon nanotubes (SWCNTs). Highly polarized ionic current measurements have been carried out in a quasi-1D nanochannel under temperature gradients up to  $\pm 100$  K. We show that the nanotube system exhibits in-out-in current rectification, which can be attributed to the thermopower effects in the nanoscale and inter-tube junctions. By controlling the ionic current rectification with the applied bias, in-out-in current rectification factors up to 0.5 have been achieved. We also demonstrate that the current rectification can be tuned by an applied temperature gradient, which is due to the change of the average tube diameter and the distribution of the tube lengths. This study provides the new perspective of understanding thermoelectric properties of carbon nanotubes and it paves the way for designing the nanotube-based nanofluidic devices. Q: How to use Japanese language in notepad++? I have installed Notepad++ and Japanese language. But, I can't use Japanese language in text editing. In all text editing there are no Japanese. I found that I should install the Japanese font for it. I installed it and still not working. Can you tell me, how to use Japanese in text editing of Notepad++ and other text editors? A: I had exactly the same problem - it turned out that notepad++ had not been properly setup to handle UTF-8 characters. In the NppScript configuration for languages (on Windows) select the box: Automatically detect encoding Click on Save and exit. This should cause Notepad++ to open files in UTF-8 with ANSI support. Pancreatic exocrine function and cephalic circulation in patients with adrenal carcinoma. To evaluate the influence of hypercortisolism on the pancreatic exocrine function and cephalic circulation, the secretin-pancreozymin test was performed in four patients with adrenal carcinoma. In one patient, who had had no treatment for the adrenal carcinoma, the serum insulin concentration in the fasting state
