In terms of the workflow side of things, the whole concept of being able to have multiple textures on the same image is quite nice. I can show you how well this works in the app, take screenshots, and even crop it all in real time. Of course, having the option to add textures and adjust their arrangement is pretty cool. In fact, you can now even align mobile phone files and import them to Photoshop via the cloud. I definitely see the benefit of this addition. Speaking of which, are there any other nice additions to the mobile app? Perhaps the ability to create a brush from the photo selected and apply it to the image bricksby bricks. That is exciting, actually. Another option would be to use the base brush to sculpt over any area of the image that is covered in texture, to create an interesting new look. Under the same topic, I think it would also be cool to see some options for including the actual pixel data of the photo in the various textures. As you know, we can use Photoshop's power to provide the best of data for the originals, but I believe that the same kinds of features can be offered for mobile devices too. Of course, this feature will take time to materialise in the future. With that said, Adobe could stop being particular about the iPad Pro and the iOS 11 and instead look at these current bug-ridden issues and see how they can be improved. This is certainly the case for Lightroom, and I personally do expect that the iPad Pro will see some more tweaks to get here.

Adobe Photoshop Review Even so, the challenge with all of the apps out there today is the fact that they are not really any more useful. In other words, it is not just the mobile app that is lacking in features, but all of the features are available in the desktop version too. This is a big hurdle when it comes to bringing an app into the iPad Pro market. Of course, Adobe is targeting these traditional keyboard folks once again. Will they fail like they had a previous go? Time will tell, of course. In the mean time, I expect to see some version of the iPad Pro that is full of exciting features, not just the previously mentioned editing tools. The software will look to have a button bar that can be placed anywhere in the image. It can then be split into multiple panels, so that you can actually have a zoomed out view of the whole image and a closeup of just that section - think Lr6. Adobe can even copy this with the ever-increasing tablets. I suppose it is time to wish everyone a happy holidays and enjoy the news about the iPad Pro.

Adobe Photoshop Review An excellent example of why the iPad Pro is the ideal platform for any serious creative app. Even Adobe has responded positively to the recommendations of professionals. The one thing that I am disappointed in is that the interface for the mobile app has not really been changed much in recent updates. I can understand the hesitation, considering how well the previous touch solutions have done. As for me, I personally believe that a more regular and simple user interface would do well in the long run, rather than trying too hard to mimic an Lr6 based interface. That is just an opinion of course. In the mean time, however, the iPad Pro and Adobe Photoshop Sketch are great tools for when it is time to break away from the desk and get busy, but also to keep us connected to Photoshop.
