Codenica Inventory Crack Activation Code For Windows [2022]

Detailed Codenica Inventory Description: Description: Codenica Inventory is a remote audit software for network computers, simultaneously providing the automatic software status audits of the computers in the company, and a software for tracking computers and employees in the network. The application doesn't take long to install and it doesn't come with a complicated setup that you would need to complete before you can actually use it. It sports a really intuitive graphical interface with lots of nice features and tools at hand. Codenica Inventory is packed with tools that allows you to track computers and employees in the network, as well as to perform audits. Remote scanning of IT resources The application enables remote scanning of IT resources without the use of agents installed (DCOM), using the installed Agents and through scanning computers using the D-Scanner (desktop scanner - computer scan run from the USB drive with the scan results saved to files). The Codenica Audit process is divided into two stages: scanning and identification. The first stage is responsible for collecting source data (WMI, Windows Registry and scanned files) from the audited computers. The second stage is a process of transforming source objects into inventoried objects (Computer Sets (IT-Sets), Hardware and Software). Each stage can be fully configured. Another important function of Codenica Audit is the mechanism for tracking network computers and employees. It requires remote installation on employees' computers of the so-called Agents, i.e. small modules tracking an employee's current work and activities. Agents running on employees' computers not only perform tracking but also enable remote execution of several functions which may be categorized as Help Desk (employee remote support). All in all, Codenica Inventory is a complex and nice application that you could use in order to perform audits and track computers and employees in the network. Another important feature of Codenica Inventory is the mechanisms for remote deployment of the agents (installation and removal). The application has a good configuration tool (setup wizard) that makes all the difficult parts of setting up the application very easy. What's New Version 2.5 - May 2011: - New option "File System" on the Windows target PC will allow to remotely audit WMI entries; - New option "Windows PC Reset" in the Help Desk module will allow to remotely reboot a selected PC via the Agent; - A new option to remove one or more computer sets

Codenica Inventory Crack With License Key

This little but powerful application is designed to add Macro keys to your WinZip file. How to install: Just double-click the ZIP file and it'll be installed on your computer. It will create a new Quick-access Toolbar in your Internet Explorer. Usage: Save the changes Choose your zip file Choose your new key/macro Note: Make sure you select the right "Macro" from the "Edit" menu. You can even use the "Add Shortcut" option to create your own key/macro for WinZip. Some of the key/macro's that you can add to your zip file: -- Macros Move/Copy (Ctrl+C/Ctrl+X) Print (Ctrl+P) Delete (Del) Explorer (F4) Format (Ctrl+E) Exit (Alt+F4) Run (Ctrl+Shift+F4) Run as Administrator (Win+R, enter "regedit" and press Enter) Edit with Notepad Execute (Alt+Enter) Scan with MS Office (Alt+I) Search (Ctrl+F) -- Shortcuts 1 2 3 4 5 6 7 8 9 0 --Hotkeys Q A S W E T O A Note: Hotkeys like E,F4,W,Q,A,T,O,Q,E etc are also set as macros. Note: If you have a scenario where you want to set a Macro for a scenario where you would normally use a Hotkey, we suggest you do this: Set your Macro to the Hotkey. For example: If you would normally use Q (Windows/Q on a normal computer) then set your Macro to Q. This way, if you press Q, it'll run your macro (if you set any) and you can just close your browser and re-open it. --Edits Get|Gets Fix|Fixes Trash|Trashes ToggleHidden|Toggles HideAll|Hide UnhideAll|Unhides Show|Shows -- Menu Commands In|Inspect Out|Out Open|Opens Close|Closes Save|Saves Check|Checks New|New Open|Op 2edc1e01e8

Codenica Inventory Free [Win/Mac]

Codenica Inventory is a web-based solution that allows users to track and manage IT resources and their activities in the network. It's a remote audit software for network computers, simultaneously providing the automatic software status audits of the computers in the company, and a software for tracking computers and employees in the network. Complex but intuitive graphical interface The application doesn't take long to install and it doesn't come with a complicated setup that you would need to complete before you can actually use it. It sports a really intuitive graphical interface with lots of nice features and tools at hand. Codenica Inventory is packed with tools that allows you to track computers and employees in the network, as well as to perform audits. What's New In Codenica Inventory?

Codenica Inventory is a powerful and configurable remote audit application. Using Codenica Inventory you can track computers and employees in the network. You can perform remote audits of computers using the D-Scanner (agentless). Codenica Inventory requires no additional agents to perform remote audits. It allows scanning of computers in the network, monitoring of computer activities and auditing of computer performance in the real time, all with the use of Codenica Audit Wizard, a configurable interface. You can scan computers and employees in the network. All scanning is performed automatically by Codenica D-Scanner. It's a remote scanner that runs in a user's PC without the use of installed agents. Codenica D-Scanner supports scanning computers and employees in the network in real time. In order to audit computers and employees, Codenica Audit Wizard allows the following:

- Detecting the OS type of the computer.
- Identifying the computer's IP address,
- Network address,
- Location on the network,
- User ID,
- Computer ID,
- List of all software on the computer.
- Date and time of the computer startup.
- The presence of an active Internet connection.
- The state of the computer.
- The processes currently running on the computer.
- The states of the processes.
- Computer disk space.
- Computer memory.
- Network connections.
- User connected to the Internet.
- Whether the computer is currently online.
- The computer's keyboard and mouse activity.
- The computer's running programs.
- Whether a program is currently running on the computer.
- Computer volume information (including the running processes).
- Windows Registry information.
- Computers listed in computer sets.
- Computer model and serial number.
- Computer information in specific categories (IP address, location, user ID, etc.) and whether the user exists.
- The hardware and software information.
- The software installed on the computer.
- The computer processes.
- The time of the last computer reboot.
- Time of the computer's last Internet connection.
- The application's process (if the application runs in the background) or the state of the application process (online or offline).
- The processes on the list (including the activity of the process).
- Running processes on the computer.
- Hard drive usage.
- The execution time of the computer's running processes.
- Computer and user software licenses.
- What's the state of a process (running,

dead, offline, etc.). • What's the state of the process. • The computer's OS
