Members of the iOS family of apps including Adobe Lightroom and Photoshop Touch, may know that the apps are being tested by a new platform called Adobetechkit . Lightroom, and earlier versions of Photoshop Touch, were made available on this new platform before their official release later this year. To catch you up, here is a quick introduction. We'd been building up to this—the release of Adobe® Photoshop® CC, one of the most prolific and certainly the most powerful of the photo editors in the Adobe Creative Suite. There are a lot of things to like about Photoshop, starting with its five-panel layout. Its sheer number of features and options are daunting enough to encourage even the most experienced users to take a well-worn road to mastery. While at it, they may well be tempted to add special-effects or design their own plug-ins. To be fair to Photoshop, it's far from the most popular photo editor, pushing away all but the most committed photographers. But few are likely to stay away this time around, with this latest release and a 21-month free trial of Creative Cloud. That said, I usually test Adobe products over fresh installs of Windows 7 and Windows 10. Sometimes new hardware connections (especially if they're not supported on Windows 7), OS optimizations, or software updates can affect something unexpected. Adobe software can generally be much more temperamental than OS software. Sometimes you need to eliminate the choices available on the screen. I find it helpful to make sure that I have the latest version of a program. I also often install prerelease versions in order to get the latest software updates. This does not, however, apply to Photoshop and Photoshop Elements, because they are perpetual editions that are always available from the Adobe website. Unfortunately, after a few years of making recommendations, I've found myself repeating myself and have stopped making recommendations for those two products.

Our endorsement of Adobe Photoshop as an Editors' Choice product is contingent on Adobe being perfectly pleased with their new Mac OS version of the software. The previous functionality and stability review was based on a few months ago, when the software was running on the old OpenGL ES 2.0 hardware stack. According to recent community feedback to the Adobe product forums, the performance of the software in macOS is in fact a major improvement over the previous OpenGL ES 2.0 performance. This is down to the switch to Metal. Hardware performance still needs to catch up to software, however, which needs improvements, such as sculpting. We're looking forward to Adobe leveraging their much larger battery of AI and research expertise to accelerate performance and provide excellent usability. Version 20.0 adds an all-new feature called Perspective Warp, which has been updated to use Face AI and other new AI algorithms to automatically correct facial expressions and warp a subject's facial features to a photo's viewpoint.
