When you have a keen eye for detail, I have to ask: "Why go to Photoshop to suggest just a minor change to your subject in a photo like this?" The answer is the "Merge Visible Layers" feature: It not only uses your photo-editing skills to make minor corrections, but it also helps you create a new layer and quickly make minor changes to it. *This content is law approved and cleared. You can use it, share it, drop it to a used-book store, post it around the web and do whatever you want with it. But if you do use it, you agree to share some of that usage with the folks at Stigi.com in return for a download link to stigi.com-camera-reviews.com* Ask yourself: *Can you be the MVP in your company? Would the people you work with think you could be the visionary? Could you create a workflow so fast, intuitive, simple, and fun that users would say, "Hey! We should have been doing this forever!"?* Overall, this is a very good app that could be better. These are some legitimate gripes, so perhaps Sony could help out in these areas. With the price of the Androids, affordable options like Sony's Digital Photo Professional might also be worth comparing. The Switch to LR6 is also a workflow change for me as I had already exported files with the previous version of LR (9). I may not have thought of pushing a file to a different tool, but it happens when pushed by odd processes, so I need to re-factor a bit of my files! And yes, I would have been perfectly happy to end the review at this point, but unfortunately the last question brings us on to the downsides of Adobe's rightly popular image management and RAW converter tool. I did say Lightroom emphasizes speed, but perhaps clarifying this statement is in order. The emphasis on speed lies in the flexibility of available tools. For example, you can now do some advanced image "healing" with the updated Spot Removal tool and remove objects that are more complex than simple dots. And that saves you time working with Photoshop on the same image, which I personally appreciate very much. When it comes to the actual speed of operation, however, things haven't really changed for the better. Importing is, if anything, slightly slower. The same with Exporting, which also feels to be more sluggish than before. Use that brilliant Spot Removal tool too many times on too many photographs and you may experience lag when changing adjustments or moving from one image to another. Other obvious bugs and

performance issues do not make a very good impression, either. Of course, complex Spot Removal shapes are bound to eat up those resources. After all, there is quite a bit of vectoring involved, not to mention that the image is not actually changed since Lightroom applies changes non-destructively. In essence, any adjustments you perform, including the Spot Removal and the Radial Filter tools, remain as descriptions that must be read by the software. Even so, I believe that a careful optimization of how computer resources are used, as well as some database tweaking should be possible. Or perhaps Adobe needs to start utilizing some in-memory database processing features that we see in enterprise-class databases and applications today. Yes, the speed of modern computers is faster than ever, but with the software getting more and more complex, I feel that Adobe should invest some time in optimizing and tweaking it. It took Adobe a while to add full 64-bit support to Lightroom and I am not sure how well it actually utilizes multi-core CPUs and caching technologies. Probably not enough, considering how slow Lightroom can get. I believe that Multi-threading should now be a part of the Export process, so that we do not have to export multiple images in batches.
